

weblogger Launch

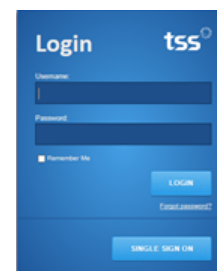

1

Collect the webloggers for shipment

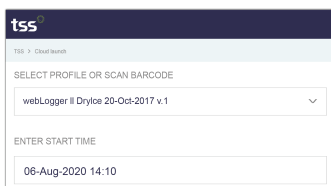

2

- a. Login at az.ccis.se
- b. Select "Cloud Launch"

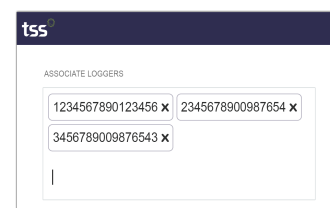

3

- a. Select profile
- b. Add trip data
- c. Scan weblogger barcodes or type in weblogger id's

4

- a. Verify that the IDs are correct
- b. Press the launch button

5

- a. Press the start button when you are ready to start recording the temperature.
3 second, LED = green
If you use a profile with no start delay the monitor/s will start recording immediately when you process the green start button.
- b. Attach to shipment
- c. **Attention: Never plug in the webLogger into the computer after launch. It stops the mission. You can check the webLogger status in TempViaNet.**

**Check the TVN pending shipment user guide in case of questions about webLogger status after launch.*

Placement of temperature monitors on the product is outlined in the AZ Quality and Compliance Manual procedure 8-P27
