

Return guide Sentinel

1

Sentinels are multi-use devices that must either be reused for outbound shipments, or relocated to a site that can use them after the data has been secured by uploading it to CCIS using Sentry as a gateway.

2

If you **can reuse** the Sentinel for outbound shipments please do so, using the monitor with the soonest expiry date first.

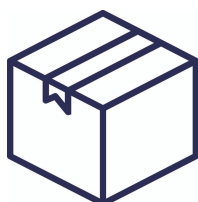

See **expiry date** on the back side of the monitor

3

If no outbound AstraZeneca shipments, the monitors must be returned to TSS for refurbishment and recycling as part of our sustainability initiative.

Collect the used or expired Sentinels, which cannot be reused in a strong cardboard box.

4

TSS will contact you to arrange collection of your used or expired Sentinels.

The following UN3091 label needs to be attached to the box for return.
Order more labels via customer.service@tss.se.

Note: If you are returning different monitors to TSS (webLogger, TempTracer, Sentinel, Sentry), you can put them in the same box. Only monitors returned for failure analysis (RMA) need to be packed separately. Please follow RMA user guide.
