

Launch Weblogger Dry Ice

1

Prepare launch

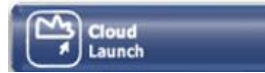

Collect required number of devices for the shipment to launch.

2

Login to CCIS

Login to az.ccis.se
Select *Cloud Launch* tab in in top menu.

3

Select Profile

Select profile in drop-down list.

Launch

SELECT PROFILE

4

Enter Logger ID(s)

ENTER LOGGER ID(S)

Scan or type the logger IDs to CCIS.
Ensure correct ID(s) captured.

5

Triptags

Review the Triptags, ensure Country of origin, Origin, Country of destination, Destination, Shipment Number and that other Triptags are correctly entered.

6

Launch & Start logger

Click *Launch* to launch loggers to shipment. CCIS will respond with a reminder to *start* the logger(s) by pushing the button until green led flashes.

Note

- **Step 4&5:** Verify all logger IDs, trip tags and the shipping number are entered correctly
- Never connect Weblogger II to a computer after launch — it will stop the logger. You can check the Weblogger status by 'short pressing' the start button, if the light shows green, it has started, if the light shows red, it is NOT started. If not started, follow step 4 again.
- After Cloud Launch, attach the logger(s) securely to the pallet(s) inline with AZ Global Standard SOP-0033730
